
A BILL FOR AN ACT

RELATING TO THE UNDERGROUND CONSTRUCTION OF HIGH-VOLTAGE
ELECTRIC TRANSMISSION LINES.

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF HAWAII:

1 SECTION 1. Section 269-27.6, Hawaii Revised Statutes, is
2 amended to read as follows:

3 "§269-27.6 Construction of high-voltage electric
4 transmission lines; overhead or underground construction. (a)
5 Notwithstanding any law to the contrary, whenever a public
6 utility applies to the public utilities commission for approval
7 to place, construct, erect, or otherwise build a new 46 kilovolt
8 or greater high-voltage electric transmission system, either
9 above or below the surface of the ground, the public utilities
10 commission shall determine whether the electric transmission
11 system shall be placed, constructed, erected, or built above or
12 below the surface of the ground; provided that in its
13 determination, the public utilities commission shall consider:
14 (1) Whether a benefit exists that outweighs the costs of
15 placing the electric transmission system underground;

- 1 (2) Whether there is a governmental public policy
2 requiring the electric transmission system to be
3 placed, constructed, erected, or built underground,
4 and the governmental agency establishing the policy
5 commits funds for the additional costs of
6 undergrounding;
- 7 (3) Whether any governmental agency or other parties are
8 willing to pay for the additional costs of
9 undergrounding;
- 10 (4) The recommendation of the division of consumer
11 advocacy of the department of commerce and consumer
12 affairs, which shall be based on an evaluation of the
13 factors set forth under this subsection; and
- 14 (5) Any other relevant factors.
- 15 (b) In making the determination set forth in subsection
16 (a), for new 138 kilovolt or greater high-voltage electric
17 transmission systems, the public utilities commission shall
18 evaluate and make specific findings on all of the following
19 factors:

- 1 (1) The amortized cost of construction over the respective
2 usable life of an above-ground versus underground
3 system;
- 4 (2) The amortized cost of repair over the respective
5 usable life of an above-ground versus underground
6 system;
- 7 (3) The risk of damage or destruction over the respective
8 usable life of an above-ground versus an underground
9 system;
- 10 (4) The relative safety and liability risks of an above-
11 ground versus underground system;
- 12 (5) The electromagnetic field emission exposure from an
13 above-ground versus underground system;
- 14 (6) The proximity and visibility of an above-ground system
15 to:
 - 16 (A) High density population areas;
 - 17 (B) Conservation and other valuable natural resource
18 and public recreation areas;
 - 19 (C) Areas of special importance to the tourism
20 industry; and

- 1 (D) Other industries particularly dependent on
2 Hawaii's natural beauty;
- 3 (7) The length of the system;
- 4 (8) The breadth and depth of public sentiment with respect
5 to an above-ground versus underground system; and
- 6 (9) Any other factors that the public utilities commission
7 deems relevant.
- 8 (c) A public utility making an application to the public
9 utilities commission under this section shall clearly and fully
10 state and support its evaluation of each factor set forth in
11 subsection (b).
- 12 (d) Notwithstanding the requirements under subsection (a)
13 or (b), a public utility shall not be required to seek public
14 utilities commission approval to place, construct, erect, or
15 otherwise build a high-voltage electric transmission system, if:
- 16 (1) The electric transmission system is to be built
17 underground;
- 18 (2) The entire additional cost due to building
19 underground, rather than above-ground, is paid by an
20 entity other than the public utility; and

1 (3) Prior to commencing construction, the public utility
 2 provides a report to the public utilities commission,
 3 with a copy to the consumer advocate, describing in
 4 detail the electric transmission system and provides
 5 sufficient documentation that affirms that the
 6 additional costs of building the electric transmission
 7 system underground will be paid by an entity other
 8 than the public utility."

9 SECTION 2. New statutory material is underscored.

10 SECTION 3. This Act shall take effect upon its approval.

H.B. NO. 2186

Report Title:

PUC; Public Utility; High-voltage Electric Transmission Lines;
Electric Transmission Systems

Description:

Eliminates the requirement for a public utility to seek PUC approval for the underground construction of high-voltage electric transmission lines if certain conditions are met.
